

BORA 3box

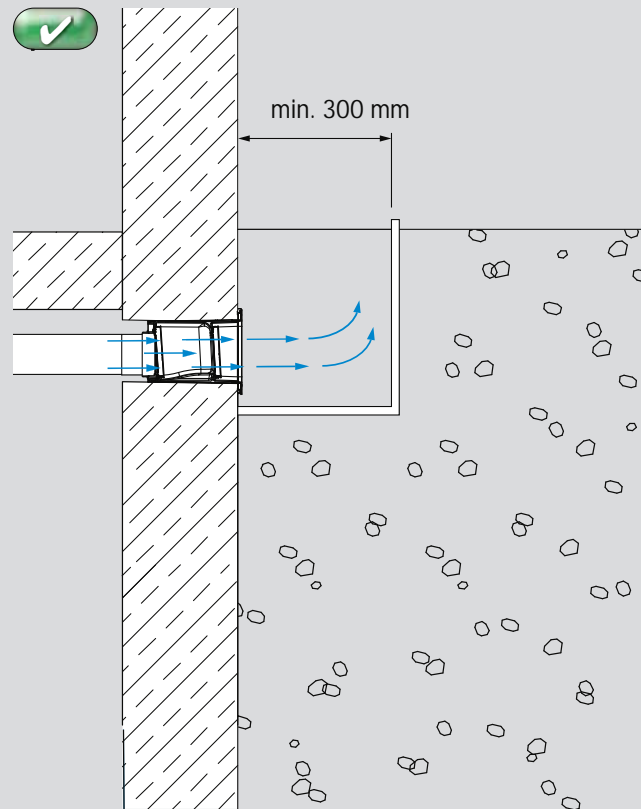

Effective performance down to the last component

Advantages of the BORA 3box (UEBF)

- Integrated solution
- Simple, mechanical, reliable functionality
- Optimised low opening pressure
- Low pressure resistance
- Resistant to environmental influences
- No additional cable routing required for the power supply or sensor systems
- Triple insulated
- Easy installation
- Adaptable to different wall thicknesses
- Condensate and rain water drainage
- Insulation between the wall sleeve and BORA 3box

In this example, the air is fed into a basement shaft. Sufficient clearance must also be ensured here.

The wall sleeve must be installed in a shaft with a width of at least 300 mm. The depth of the shaft does not matter.

The BORA 3box is part of the integrated solution for the optimally aligned overall system from BORA.
